

BULELWA BISHOLO

Data Analyst | SQL · Excel · Power BI · Python

Cape Town, South Africa | 083 989 4466 | bulelwabisholo@gmail.com [linkedin.com/in/bulelwabisholo](https://www.linkedin.com/in/bulelwabisholo) | github.com/BulelwaBisholo | bulelwabisholo.github.io

PROFESSIONAL SUMMARY

Data Analyst with a five-year background in financial services and accounting, with hands-on experience using SQL, Excel, Power BI and Python to analyse customer and financial data. Built end-to-end analytics projects in credit risk and customer churn, applying data cleaning, exploratory analysis, dashboard development and business reporting to generate actionable insights. Combines strong analytical and stakeholder communication skills with a finance-trained eye for business context.

TECHNICAL SKILLS

- SQL (MySQL), Python (Pandas, NumPy)
- Microsoft Excel (Pivot Tables, VLOOKUP, IF Functions, Data Cleaning)
- Power BI, Git, GitHub
- Google Colab, HTML, CSS
- Exploratory Data Analysis (EDA), Dashboard Development, Business Reporting, Customer Analytics, Credit Risk Analysis

PROJECTS

Home Credit Default Risk Analysis | *SQL, Power BI*

- Cleaned and analysed 305,000+ loan application records using SQL, including an 8-query, CTE-based multi-factor risk segmentation model (Approve / Review / Reject).
- Identified key default drivers through EDA: applicants under 30 defaulted at ~12.6% and low-skill labourers at ~17.2%, informing risk segmentation.
- Investigated a debt-to-income anomaly where moderate-risk applicants defaulted more than high-risk applicants, tracing it to selection bias in the lending process.
- Built an interactive Power BI dashboard with a star schema, DAX measures and conditional formatting to visualise customer segmentation and lending KPIs.
- Documented and published the full project (SQL scripts, explanations, dashboard) on GitHub.

South African Bank Customer Churn Analysis | *Python, SQL, Power BI*

- Generated a 15,000-row synthetic SA banking dataset in Python (Google Colab) and loaded it into MySQL for analysis.
- Wrote SQL queries, including a CTE-based multi-factor risk segmentation, to identify churn drivers across customer segments.
- Built a Power BI dashboard with DAX measures and SWITCH(TRUE()) calculated columns to track churn, retention and segmentation.
- Published SQL scripts, dashboard and full documentation on GitHub.

PROFESSIONAL EXPERIENCE

Client Services Consultant | **Intelligent Debt Management Group**

March 2022 – November 2025

- Managed a monthly portfolio of 275–300 customer accounts, handling approximately 30 customer cases daily while meeting operational targets.
- Developed weekly Excel reports using Pivot Tables to analyse consultant performance.
- Maintained the highest Customer Satisfaction (CSAT) ranking within the team for nearly a year.
- Used the MIP CRM system to maintain accurate customer records and workflow management.

Full-Time Studies | **Cape Peninsula University of Technology**

2017 – 2022

- Completed a Diploma and Advanced Diploma in Accounting part-time from 2017, transitioning to full-time study from 2019, graduating in 2022 and 2023.

Office Administrator | **Furntech Cape Town**

March 2015 – July 2016

- Processed and captured supplier invoices, ensuring accurate financial records.
- Reconciled supplier invoices against purchase orders and resolved discrepancies.

- Managed petty cash and stock-related invoices.
- Communicated with suppliers and clients regarding orders and invoice queries.

EDUCATION

- Advanced Diploma in Accounting – Cape Peninsula University of Technology (2023)
- Diploma in Accounting – Cape Peninsula University of Technology (2022)

CERTIFICATIONS

- Data Science Certificate – ALX Africa & Explore AI Academy
- Preparing Data for Analysis with Microsoft Excel – Microsoft, via Coursera
- Full Stack Development Certificate – FNB App Academy
- Introduction to SQL – DataCamp
