Professional Summary

Aspiring Data Analyst transitioning from financial services with hands-on experience using SQL, Excel, Power BI and Python to analyse customer and financial data. Built end-to-end analytics projects in credit risk and customer churn, applying data cleaning, exploratory analysis, dashboard development and business reporting to generate actionable insights. Strong analytical, problem-solving and stakeholder communication skills.

Technical Skills

- SQL (MySQL), Python (Pandas, NumPy)
- Microsoft Excel (Pivot Tables, VLOOKUP, IF Functions, Data Cleaning)
- Power BI, Git, GitHub
- Google Colab, HTML, CSS
- Exploratory Data Analysis (EDA), Dashboard Development, Business Reporting, Customer Analytics, Credit Risk Analysis

Projects

Home Credit Default Risk Analysis | SQL | Power BI

- Cleaned and analysed 305,000+ loan application records using SQL.
- Performed exploratory data analysis to identify lending risk patterns.
- Built an interactive Power BI dashboard visualising customer segmentation and lending KPIs.
- Presented actionable business insights and documented the project on GitHub.

South African Bank Customer Churn Analysis | SQL | Power BI

- Analysed 15,000 customer records to identify churn drivers.
- Cleaned and transformed customer data using SQL.
- Built Power BI dashboards tracking churn, retention and customer segmentation.
- Published SQL scripts and project documentation on GitHub.
